Education

Bennett University, Greater Noida

B.Tech in Computer Science and Engineering

Expected: Jul 2026

CGPA: 8.89/10

Relevant Coursework: Machine Learning, Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks

Technical Skills

Languages: Python, JavaScript, C++, SQL
Frameworks: React.js, Node.js, Express.js, Tailwind CSS, ShadCN, Framer, Streamlit, Sass
Databases: MongoDB, PostgreSQL, Firebase Firestore, Supabase
Technologies: REST APIs, Socket.IO, JWT Auth, Google Gemini API, Web Containers, Firebase, Clerk, Inngest, Zustand
Concepts: Machine Learning, Deep Learning, Data Structures & Algorithms, Operating Systems

Experience

Software Engineering Intern — Ciena

Jun 2025 – Aug 2025

Gurugram, Haryana

- Built a high-performance **C++ parser** to extract key-value protocol pairs and serialize them into structured **JSON**, improving data interoperability across the L2/IP OAM software stack.
- Integrated the parser into the **IDPBase class**, maintaining **backward compatibility** and robust integration with existing network management infrastructure.
- Conducted **regression and real-time validation testing** on hardware boards, achieving **100% functional accuracy** across **15+ test scenarios**.

Full Stack Developer Intern — Centre for Development of Telematics (C-DOT)

May 2024 – Aug 2024

New Delhi, India

- Designed a **Task Manager web app** using the **MERN stack** with task management, to-do lists, and note-taking; reduced **API response time by 25%** via optimized backend architecture.
- Implemented **role-based authentication**, **RESTful APIs** for CRUD operations, and modular **Node.js/Express.js** services for scalability and real-time synchronization.

Projects

Collabrix [\[Live Demo\]](#)

PostgreSQL, MERN Stack, Clerk, Inngest, Vercel

- Developed a full-stack **project management platform** with multi-tenant organization, project, and task management.
- Implemented secure **authentication and role-based access control** using **Clerk**; integrated **PostgreSQL** for scalable data management and automated background jobs via **Inngest**.

NeuraLink

React, Node.js, Express.js, Socket.IO, MongoDB, Google Gemini API, JWT, Web Containers

- Engineered a **collaborative AI-powered web platform** with real-time messaging, group management, and AI-assisted server deployment; achieved **under 200ms** average response time.
- Integrated **Google Gemini API** for on-demand AI features, boosting interactivity by **35%**; designed **JWT-secured** role-based auth serving **200+ users**, scalable to **500+**.

NexaChat [\[Live Demo\]](#)

React 18, Supabase (PostgreSQL + Realtime), Supabase Auth, Zustand, Vite

- Built a **real-time chat application** with **WebSocket-powered messaging** (Supabase Realtime), file/image sharing via **Supabase Storage**, emoji picker, and a full **block/unblock system** with real-time state sync.
- Implemented **user management** with duplicate and self-add prevention, smart **file-type previews**, gradient avatar generation, and a dark glassmorphism UI; application supports **100+ concurrent users**.

Well Nest

Python, Scikit-learn, Pandas, Matplotlib

- Developed a **disease prediction ML model** trained on **5,000+ anonymized patient records**, achieving **87.3% accuracy** using clustering and classification algorithms.
- Generated recommendations for **15+ diseases** and built Matplotlib visualizations, improving decision-making speed for non-technical users by **25%**.

Achievements

- Ranked in the top **1%** at Bennett University's ML-based project showcase 2024.
- Shortlisted for **Smart India Hackathon 2023** for developing a real-time public data aggregation tool.
